

The UK's Digital Health Playbook – The Best of UK Healthcare companies

#Beyond 100 Expanded Playbook
January 2022

Foreword

Digital Health is rightly seen as the answer to many of the challenges facing global healthcare. The role of digital technology in realising the dream of accessible, affordable and sustainable care has grown across the entire range of health economies in not only serving current needs but in building the basis for the healthcare of the future: personalised, digital by default and truly patient centric.

Dr Mike Short CBE
Chief Scientific Adviser
Department for International Trade

The UK has long prided itself as being a hotbed of innovation and the British Government's ongoing investment in growing our capabilities in areas such as AI and more broadly around Data Driven Healthcare, has further fuelled the creation of cutting edge, evidence-based solutions. Solutions which have the key to unlock global challenges, effectively.

These chosen UK innovations is our answer to a related but slightly different question – how do we find the best of British talent in Digital Health that's ready to go global and link it with that ever expanding worldwide opportunity? Healthcare UK, part of the Department for International Trade, has invested significant effort to identify, engage with and showcase some of the UK's leading talent, which will grow over time.

This is part two of the programme, a refresh and expansion, with now 160 UK companies. The UK companies were selected after a rigorous process based on a range of criteria including how committed they were to export and international expansion, the global uniqueness of their innovation, a track-record of working collaboratively with Healthcare UK, their responsiveness, and how well they represent the UK journey and direction in digital health, particularly with the NHS. The list will be reviewed and maintained regularly and released formally twice a year.

However, the picture of talent and innovation in the UK is a fast evolving one with new pioneers emerging daily. We hope through our programme, we will reach out to those who are not just leaders in their field but are willing to find new frontiers to make an impact.

For all enquiries, or for an introduction to one of the companies, or for any other information:
Please contact us at healthcare.uk@trade.gov.uk or find out more at <https://bit.ly/3tUkflK>

Covid19 and Digital Health – Unlocking Global Healthcare Challenges

Collaborate With Us

Digital Health means we can collect and analyse data to predict disease and intervene quicker. It means physicians have access to patient notes when they need them to make better decisions. It means patients can be seen by medical professionals without travelling. It means citizens can educate themselves on their health and wellness. It means we can use machines to do basic tasks and free up skilled staff to do more caring. It means we can do far more with less.

Digital Health uses advances in computing power and data techniques to make healthcare better, safer, faster, more accurate and reach further. Without it, we simply don't have the global workforce to cope with the demand especially with ageing populations, issues around access to care and the growth of non-communicable diseases like diabetes and cancer. It isn't sustainable to let people get sick and then bring them in physically into expensive hospital facilities, to try to treat them.

By then it is often too late. We need to move towards more virtual and remote care immediately with better prediction. We must focus on prevention and encourage independence, with more support for citizens to self-care.

The coronavirus pandemic has made this even more apparent and stretched health systems to their limits, raising important questions including;

- How to model disease and track infection?
- How to inform a populace of what to do?
- How to mobilise staff and resources at scale?
- How to train staff at a distance?
- How to test, diagnose, treat and monitor patients remotely?
- How to relieve pressure and free capacity?
- How to keep patients out of hospital and encourage self-care, especially for those with existing conditions?
- How to succeed at transforming our services rapidly and safely?
- Why did we routinely see so many patients in person anyway?
- How do we 'reset' our methods of service delivery and models of care?

Digital Health is the answer to all these questions.

“ We at NHS Digital are immensely proud to be a partner on this key book of work from Healthcare UK, and we are grateful for the support they provide to the health and care sector in the UK, including the vital network of digital health innovators.

This next step in the development of the Playbook is a fantastic example of collaboration, and with the force of the Department for International Trade, the weight of the NHS, and the strength of our innovators across the country, we can be assured of greater global success for our health tech community, and in turn, better outcomes for patients in the UK and across the world.”

Simon Bolton,
CEO, NHS Digital

Our team

Erica Butler-Chothia, Head of Healthcare Education

Infrastructure and Digital Health (Department for International Trade)

Erica joined DIT in 2016 and since then has led teams responsible for Healthcare, Life Sciences and cross-cutting programme management. Prior to DIT, Erica led regulatory policy and implementation programmes at the Department for Business, Energy and Industrial Strategy and supported regulatory reform initiatives in Armenia, Bangladesh, Cyprus and Zambia. Prior to joining the UK civil service she worked on corporate responsibility projects in Europe and the US.

erica.butler-chothia@trade.gov.uk

Madhukar Bose, DIT South Asia and Digital Healthcare Lead

Healthcare UK (Department for International Trade)

Madhukar leads Healthcare UK's work in South Asia as well as being the global lead for Digital Health, responsible for supporting UK organisations in the health tech space win business in key markets across the world.

He has conceptualised and implemented ground-breaking initiatives such as the Digital Health demonstrator in China, the Healthcare AI Catalyst in India and has led trade missions to a number of markets including Brazil, UAE, China and India.

Madhukar's management consulting career has spanned advising the NHS on the assistive technology programme, designing a new Telecare service for one of the largest pharmaceutical majors in the world, guiding the UK's Department of Health and Social Care on the national business case for mobile working in community services, and setting up a Telehealth venture in India. He is an MBA alumnus of the Cranfield School of Management.

madhukar.bose@trade.gov.uk

Alex Swanson, Digital Health Manager and Africa Region Sponsor

Healthcare UK (Department for International Trade)

Alex Swanson is a Digital Health Manager and Africa Region Sponsor in the Healthcare, Life Sciences and Chemicals Trade and Investment Cluster at DIT. Alex supports UK Digital Health companies export to Europe, the Americas and Africa; leads on developing workshops training our overseas colleagues on the sector and coordinates Africa activity across the wider Cluster. Alex has been at DIT since 2016, working in several roles in the Cluster, alongside working on DIT's High Potential Opportunities Foreign Direct Investment (FDI) programme to identify and promote investment opportunities across the whole country.

alex.swanson@trade.gov.uk

Hassan Chaudhury, DIT Digital Health Specialist

Healthcare UK (Department for International Trade)

Hassan provides expertise and insight into digital health to DIT commercial teams at Whitehall as well as in UK Embassies in over 100 countries around the globe in addition to supporting innovators, investors, Governments and health systems.

His background is in front line social work, NHS informatics and public health. He was later a founder at Health iQ – an award-winning agency focusing on real world data, and held CIO and Chief Commercial Officer positions before its acquisition and his exit in 2019.

He currently holds a range of advisory, mentor, academic and committee positions. He is a member of the Editorial Board of The International Journal of Digital Health, the Healthcare Exec Committee at The Institution of Engineering and Technology (IET), and the NIHR Artificial Intelligence (AI) in Health and Care Award Assessment Panel. He is also Co-Chair of both the HIMSS Global Innovation Committee and the PM Society Diversity Interest Group.

Hassan mentors for the NHS Innovation Accelerator, KQ Labs at The Francis Crick Institute, SimDH at London South Bank

University and The Edison™ Accelerator with Wayra and GE Healthcare. He also holds an Honorary Research post at Imperial College London and is a Visiting Lecturer at UCL Global Business School for Health.

He is a Director at both Vita Healthcare and Inovia Bio, and is also part of the commercial team at Great Ormond Street Hospital for Children.

hassan.chaudhury@trade.gov.uk

Natasha Bent, Senior Healthtech Manager

Healthcare UK (Department for International Trade)

Natasha has had a career in the Civil Service since 2000 when she joined the Department for Trade and Industry and has worked in various areas across the department. Natasha joined the Department for International Trade in 2016 and has undertaken a number of roles assisting UK industry in international exports. Natasha has been based in the Healthcare, Life Sciences and Chemicals Team since November 2020 and is now a member of the digital health team.

natasha.bent@trade.gov.uk

Nicola Parry, DIT Marketing Specialist

Healthcare UK (Department for International Trade)

Nicola has been working for DIT in the healthcare and life sciences sector, for many years, supporting the team in London, the UK regions and Embassy colleagues and markets. In this role, Nicola, has been developing campaigns for the sector, creating opportunities for export and FDI. One of the key areas for this, is creating communications and programmes for large scale and smaller events.

The UK digital health solutions

Self-care

How can we support citizens and patients to better look after themselves? To take charge of their own conditions and try to work on wellness and prevention rather than cure, something increasingly prized by public health systems and insurers alike, often described as self-care. This includes patients seeking consultations, advice, or to better understand and manage their health information. This involves better health and patient outcomes, with the patient receiving better care and experience. This level of care offers empowerment for the person in managing their own care and puts less strain on the health systems.

Triage and Pre-Assessment

Streamlining large groups of patients takes time and resource. This area explores the new technologies that can support patients to offer quicker, effective services, whilst optimising the care the patient receives. How do we gather data to know what is going on at a system level?; or signpost services better; stratify patients based on risk more intelligently; and redirect precisely to the most appropriate care setting. Can we avoid sending everyone via emergency departments? Our UK technologies support pre-assessment, for example in pre-operative settings, as well as wayfinding, streaming and redirection, particularly in urgent and emergency settings.

The UK digital health solutions

Screening and Diagnostics

The demand for AI applications in medical imaging is growing rapidly but it is challenging for healthcare facilities to deploy AI applications. Every application is time consuming and requires significant IT and clinical resources to implement. But we know that early diagnosis and intervention improves outcomes, saves lives and optimises resources. Find out how our UK companies are improving public health, surveillance, screening programmes and diagnostics, particularly as part of a long term strategy and also at the point of care, rather than at a laboratory. The UK companies offer solutions to simplify this process and have been tried and tested in large populations in NHS Hospitals. These companies provide regulatory approved screening and diagnostics applications that add clinical value.

Remote and Virtual Care

How do you monitor patients remotely and maintain the ability to act fast? These digital applications are interventions that are initiated by a physician and linked to a clinical care pathway. It differs from self-care solutions, which are driven by the empowered citizen. These UK solutions allow healthcare providers to reduce risk, cost, and readmissions and demands on your health system, while improving the patient experience, by empowering teams to safely monitor, manage and engage patients at home. How can we prescribe apps known as Digital Therapeutics (DTx) for treatment remotely? And how do we maintain a sense of compassion and community while appreciating there is often stigma attached to accepting these services and that people drop out regularly?

The UK digital health solutions

System Efficiency & Transformation

Deliver improvements in the quality of care, through the use of world-class digital technologies and information. Experts share their learning and experiences through the creation of blueprints to enable others to follow in their footsteps, as quickly and effectively as possible. Some challenge areas include: how do we enable digital transformation? How do we design healthcare infrastructure? how do we improve system effectiveness and backend efficiency, for example bottleneck analysis, patient flow and clinic rostering? How do we collect data into user-friendly systems? Our exceptional UK companies provide digital solutions to support transformation in all aspects of healthcare.

Data and Analysis

How do we share and make better use of the health data we have, both structured and unstructured, to make more intelligent and timely decisions? This area provides a selection of evidence-based solutions that have seen very successful outcomes for our UK healthcare providers, both public and private.

The UK digital health solutions

Augmented Healthcare Professionals

These UK solutions have been supporting the NHS workforce and building future capability and capacity in areas such as skills and knowledge. How can we augment our people? For example; automate routine tasks; support clinical teams to carry out their roles more efficiently; support non-clinical and less qualified staff to take on more of the burden of healthcare provision; and generally stretch our qualified teams to do more while avoiding burnout. How do we offer medical education and training in scalable digital environments?

Collaboration & Communication

Technology can support getting critical information and at the right time. Digital applications are achieving improved communication whether to patients or between staff themselves so they can collaborate. In addition companies that want to engage workforces genuinely, for example improve their wellbeing or gain new ideas on quality improvement and safety, can use these models and technologies in their corporate environments.

The UK digital health solutions

Future Tech

There are exciting new innovations in what is becoming possible for healthtech, taking advantage of major opportunities in healthcare. For example our UK companies are offering genomics for precision medicine, quantum computing, AR/VR, 3D printing and wearables.

Healthy Ageing

The UK's Industrial Strategy identified Grand Challenges to put the UK at the forefront of the industries of the future, ensuring that the UK takes advantage of major global changes, improving people's lives and the country's productivity. They included AI, data and ageing society. There are many UK companies who offer solutions to support the health and well-being of populations, as they become older and more reliant on health systems.

Our proposal to you

Examine what we've done

Adopt what feels right for you

Collaborate with us

The UK is a global leader

The UK is a genuine global leader in developing brand new digital health innovation and getting it to market, regulating it and then finally validating it at scale. It is one of the best places in the world to start a digital health company, with unparalleled support structures for innovation.

Companies that prosper in the UK are well-prepared to scale abroad because they have succeeded in a challenging market and invested in their innovation. Global firms often use the UK as a launchpad into other markets, to find talent, test their ideas, get onto the radar of investors and to seek acquisition.

The UK companies were selected after a rigorous process, and were judged on a range of criteria including how committed they were to export and international expansion, their responsiveness, their ethics and values, any track-record of working collaboratively with Healthcare UK, the global uniqueness of their innovation, and how well they represent the UK journey and direction in digital health, particularly with the NHS. This report will be updated twice a year. For those who wish to put forward a UK company for consideration please email healthcare.uk@trade.gov.uk.

Acadiant

Company Profile:

Acadiant creates software for telehealth, virtual care, and patient safety. In the NHS these include Maternity Direct, the UK's first telemedicine app connecting pregnant women with midwives and storing their chats in the hospital's record system; SMART, the most comprehensive mortality analysis tool in the NHS; and, CHARM, an audit tool for patient harm due to delayed treatment. For the Canadian market, COVID virtual clinic apps and PULSE, a virtual care clinic for long-term care of heart-failure patients.

Acadiant solutions identify workflows to solve specific healthcare challenges. The compliant, secure, intuitive software interoperates with hospital record systems, have a full audit trail and 100% uptime, 24/7.

Keywords:

100% uptime 24/7, Software development, custom, secure, scalable, intuitive, compliant, interoperable.

Current operating countries:

UK, Canada

Adviseinc

Company Profile:

AdviseInc's mission is to #MakeSense of healthcare spend data. We identify significant financial benefits for healthcare systems by joining our award winning analytical solutions with artificial intelligence and commercial / clinical expertise.

We developed the world's first country-wide product price benchmarking solution, comparing like-for-like purchases for over £15bn of UK healthcare spend, across 60,000 suppliers and over 2m products. We extract information from your raw data and add insights to drive actionable intelligence for our customers - including over 200 UK public and private hospitals, the MedTech supply base and international hospital groups in the USA, Europe and Australia. Our solutions in the UK have saved hundreds of millions of pounds for taxpayers over the past 6 years.

We've proven time and time again to reduce cost, improve processes, reduce risk and drive greater value for money.

BMJ

Company Profile:

As a global healthcare knowledge provider, BMJ publishes one of the world's top five most cited general medical journals, The BMJ, and over 70 specialty journals. The company also offers digital professional development learning modules and clinical decision support tools. These products and services help health professionals manage the assessment, diagnosis, treatment and management of patients and improve the quality of care.

More than 5.5 million users access BMJ's websites, including clinicians, nurses, students, academic institutions, hospitals, ministries of health, patients, commercial companies, governments and healthcare organisations. The company publishes in 14 languages and produces specialist publications for 19 countries, including the United States, India, Brazil, Australia, New Zealand, China, and the Middle East.

Since 1840, BMJ has been supporting health professionals to help them make better, more informed decisions. Today, it continues to be one of the world's most trusted sources of information and provider of educational and evidence based, point of care tools.

Healthy Ageing

C the Signs

Company Profile:

C the Signs is an award-winning clinical decision support tool founded by doctors. 1 in 6 deaths globally are due to cancer, making cancer the second leading cause of death worldwide. On average, half of all patients are diagnosed late, with majority dying from the disease. Yet if diagnosed early, over 80% would survive.

The tool uses artificial intelligence mapped with the latest evidence to support healthcare professionals to identify patients at risk of cancer at the earliest and most survivable stage of the disease. Covering the entire spectrum of cancer, C the Signs can identify which cancer(s) a patient is at risk of and, what test, investigation or referral they need in less than 30 seconds. C the Signs currently covers a population of 8,000,000 patients.

C the Signs is available on App, desktop and integrated with the patient's electronic health record. C the Signs is an evidence-based tool, that has had a significant impact on patient outcomes. Trials to date have demonstrated a 30 times improvement in cancer detection rates.

Helping accelerate early diagnosis and survival from cancer.

Keywords:

Early diagnosis, cancer, primary care, oncology, digital screening, clinical decision support.

Caristo Diagnostics

Company Profile:

Caristo Diagnostics Ltd is an Oxford, UK based risk prediction company. Comprising a team of scientists, engineers, clinicians and commercial experts, the company's vision is to transform health outcomes through clinical and scientific innovation. Through advanced analysis of medical images, it provides physicians with unique information to allow individualized treatment decisions.

Caristo's first product, the CaRi-Heart® Analysis, helps predict Heart Attacks years in advance. The CaRi-Heart® Analysis can be applied to most routine Cardiac CT scans. The CaRi-Heart® Analysis combines novel scientific insights with Artificial intelligence to quantify coronary inflammation.

Caristo Diagnostics applies Artificial Intelligence to scientific innovation to improve cardiometabolic disease risk prediction and health outcomes through individualised patient care.

Cinapsis

Company Profile:

Cinapsis' mission is to make it easy for clinicians to communicate with each other and share information so that they can make smarter referrals. Cinapsis SmartReferrals is their NHS-approved clinical communication and referral management platform that gives community and primary care clinicians, paramedics, pharmacists and opticians immediate access to specialist advice, resulting in smarter triage, faster decision-making and fewer unnecessary referrals.

Clinicians can share images, video, voice calls or end-to-end encrypted instant messages about a patient's condition with their colleagues or a specialist using their personal device or directly from within the electronic patient record system. All information shared is automatically uploaded to the patient's medical record with no image or data stored on the personal device and personal cloud.

Huma

Company Profile:

Huma exists to help people live longer, fuller lives. We improve healthcare and research with a disease, cloud and device-agnostic digital health SaaS platform. We power digital clinical trials and run hospitals-at-home across the UK, Germany and the UAE. Evidence shows our Covid-19 service can double clinical capacity, reduce readmission rates by a third, and reduce costs.

We created an app that securely combines real-time data from patients, sensors, devices and digital biomarkers, with easy dashboards for doctors and researchers.

The app is used to generate predictive insights, detect health deterioration and enable remote monitoring for digital clinical trials, companion apps, peri-op support and hospital-at-home services.

Keywords:

Digital medicine, digital clinical trials, digital biomarkers, patient apps, remote monitoring, real-world data.

IMMJ

Company Profile:

IMMJ Systems enables the rapid digitisation of paper based clinical content for use at the point of care. We do this through our MediViewer™ electronic document management solution which has been built specifically for healthcare providers and designed around the needs of healthcare professionals. IMMJ Systems provide an end to end solution that optimises every aspect of the digitisation of clinical content at a fraction of the cost of our competitors. By providing intuitive, simple, secure and extremely fast access to patient paper records through digitising the process, MediViewer™ delivers significant improvements in patient care quality alongside operational and cost efficiency benefits.

MediViewer™ is used by over 45,000 healthcare professionals supporting many millions of patients today. Our technology allows healthcare professionals to view digitised paper patient records in a simple but powerful 'viewer' from any device. We integrate with all Electronic Patient Record (EPR) solutions and enable clinicians to quickly search and surface required information at the point of care. During the Covid-19 pandemic, we have supported many UK Hospital groups to deliver virtual clinics through the provision of MediViewer™ as a platform to access medical records via the cloud.

Collaboration & Communication

Infinity Health

Company Profile:

Infinity is a digital platform on which health and care staff can log, share and coordinate their daily care tasks in real-time. It eases the burden on NHS staff by helping them to manage their workload more easily, collaborate with colleagues from across specialties, and give visibility of the information they need, when they need it.

Using Infinity solves many communications issues that arise with current paper-based processes, and that lead to more than one third of adverse events in healthcare. It saves hours of valuable clinical time, reduces the chance of things being missed, eliminates duplication, and supports improved patient flow.

The platform integrates with and sits alongside other patient record systems, supporting staff to seamlessly coordinate care and access patient information from the point of care. This is safer for them, safer for patients, and more efficient.

It's time to stop using paper lists and spreadsheets in healthcare.

Macusoft

Company Profile:

37 million people globally suffer long term eye diseases that lead to devastating sight loss if not monitored regularly and treated. Demand is soaring from an ageing population and the increase in diabetes to the point where even the most advanced health systems can't cope. Consequently, cases of sight loss amongst patients are increasing due primarily to delayed treatment.

Macusoft has developed an artificial intelligence (AI) clinical decision support system for the optimal management of preventable sight threatening eye conditions. Treatment is tailored to each individual patient and delivered at the point-of-care for the best possible outcome.

The AI system is cloud-based and can be deployed rapidly at scale across health systems to alleviate the overburden in eye departments and reduce unnecessary sight loss.

Medic Creations Limited

Company Profile:

Medic Bleep is a secure and real-time communication and collaboration solution for healthcare providers and integrated health and care systems. It enables doctors, nurses, and multidisciplinary teams to communicate and collaborate securely within and across healthcare organisations and systems.

Medic Bleep displaces conventional one-way pagers with a solution capable of instant one-to-one and group messaging. All communication can be linked to and held as part of the patient's Electronic Health Record (EHR) - this helps keep patient-centric communication coordinated, auditable and secure.

The increased efficiency in communication accelerates productivity, improves patient outcomes, and reduces costs. An independent time and motion study has shown that Medic Bleep saves each nurse 21 minutes and each junior doctor 48 minutes per shift.

Medicspot

Company Profile:

Medicspot operates the largest network of UK clinics outside of the NHS. Each clinic has a telemedicine station powered by Arc Health. The station boasts a stethoscope, otoscope, blood pressure monitor, thermometer, and pulse oximeter. This gives doctors the ability to examine a patient during a live video consultation, offering the same experience as an in-person appointment.

Patients now have better access to exceptional care. They can choose from one of hundreds of clinics where a doctor can remotely listen to their heart and lungs, examine their ears, skin and throat, and record observations like blood pressure, temperature, oxygen saturation and pulse rate. Medicspot offers a near substitute for in-person appointments but with the cost savings and efficiency of digital care.

The Arc Health platform has been used by Medicspot and NHS doctors to treat more than 50,000 patients, with an average rating of 9.7/10. Medicspot plans to scale its network of clinics globally; all it needs is a strong internet connection and space for the telemedicine station.

Keywords:

Remote examination, remote consultation, remote monitoring, video consultation.

Metix

Company Profile:

Metix assists in automating patient transport processes and generating insights that allow clinical teams to continuously improve. Metix's unique capability is to digitize high acuity monitoring and seamlessly combine clinical, operational and demographic data with a transport team's administrative processes. Metix uses universal monitoring sensors and techniques to capture patient vitals' data. Metix then compiles and transmits the data for continuous real time viewing and in formats that satisfies administrative requirements helping to cut administrative time by up to 66%! This time saved allows the transport team to use the Metix system as a foundation for quality improvement, enabling the auditing of a patient transfer to analyze their treatment effectiveness and where further operational improvements can be made. Furthermore through real time continuous remote monitoring a physician can be involved in the patients transport journey. Studies have shown that there is a 20% reduction in patient mortality when prehospital teams are physician-led. The Coremed provides a mechanism for physicians to be included at every stage of the transport allowing them to assist with treatments and interventions. Metix is confident this will lead to greater clinical outcomes as well as increase in patient satisfaction and reassurance. Metix is expected to launch in the USA this year and is seeking partnerships with Hospital systems to streamline their critical patient transfers.

Navenio

Company Profile:

Navenio's AI-led location-based Intelligent Workforce Solution helps transform and improve workforce efficiency in hospitals by understanding healthcare staff's movements and prioritising workload in real-time, based on the principle of 'right person, right time, right place'.

Underpinned by award-winning University of Oxford science and unlike other indoor location solutions, Navenio unlocks significant improvements in workflow without the need for surveying or investment in new infrastructure. Navenio delivers highly accurate and scalable indoor location and works where GPS does not work, enabled simply by using sensors in smartphones.

Navenio has had a dramatic effect on efficiency and productivity in UK hospitals, doubling the amount of work being completed by multiple teams, resulting in better care and improved patient outcomes.

Navenio's technology is available as a standalone solution or can be used to inform decision-making and facilitate location being integrated into a hospital's existing apps and platforms.

It's a bit like Uber...but for staff in healthcare" Dr Harpreet Sood, Former NHS England Deputy CCIO.

Oxsightglobal

Company Profile:

OXSIGHT was founded in Oxford, UK in 2016 to transform the lives of people with visual impairment. Our founding members began their research at the University of Oxford in 2010, investigating how technology could benefit those with low vision. Their successful work led to international recognition, and the establishment of our commercial venture to develop wearable solutions for anyone living with sight degeneration.

Today, our team includes scientists and clinicians across many disciplines, such as ophthalmology, neuroscience, computer vision and machine learning, all working together to develop new products that let people live life to the fullest. Along the way, we've worked in partnership with leading global names in visual impairment and technology, including Google, The Royal National Institute of Blind People, the Guide Dogs Association, Royal Academy of Engineering, the National Institute for Health Research Invention for Innovation and Moorfields Eye Hospital.

Tympa Health Technologies LTD

Company Profile:

TympaHealth Technologies Ltd is a team of doctors, audiologists and technology experts united by a vision to help the world to hear.

Half a billion people around the world currently suffer from hearing loss and that number is quickly rising amongst all ages. Because hearing loss is a condition that can't be seen, people suffer in silence, often waiting too long to seek treatment. Our global mission is to deliver preventative care, early, by making hearing assessments and intervention more accessible, affordable, and easy to use.

Tympa Health has developed the first all-in-one ear and hearing health assessment platform. The system revolutionises how allied healthcare professionals diagnose and treat of common hearing loss conditions outside traditional primary or secondary care settings, like pharmacies and care homes.

Tympa is a multi-award-winning company and is the only solution of its kind dedicated to the democratisation of ear and hearing care.

Keywords:

Democratising ear and hearing health across the world.

Healthy Ageing

Ultramed

Company Profile:

MyPreOp is an online patient driven preoperative assessment programme. Patients are given access to www.myultramed.com with a hospital and product specific code after a 'decision to treat' i.e. they need an operation. They create an account, fill in the FHIR based questionnaire and then submit their data to their healthcare provider. This is reviewed by a registered nurse in the Clinician Portal and the patient moved through the various steps in a preoperative assessment including the recommended tests and actions made by MyPreOp. Once the preoperative assessment process is complete, a pdf is generated which is then integrated in the patient's electronic record. MyPreOp® is supported by the NHS Innovation Accelerator for widespread adoption in the NHS. It is used in hospitals across the UK including Guys and St Thomas's hospitals.

Keywords:

A personal health record, owned by the person.

Vivan Tx

Company Profile:

Vivan Therapeutics is a London based biotechnology company offering cancer patients worldwide access to the most advanced personalised cancer therapeutics based on technology pioneered at The Mount Sinai School of Medicine, New York.

The technology, known as the Personal Discovery Process (PDP), was developed to effectively address the finding that real-world patient tumours are made resistant to single-drug treatments. PDP targets the unique genetic complexity of each patient's tumour to identify the precise combination of drugs that works optimally on the patient's specific tumour.

The Personal Discovery Process methods are licensed exclusively to My Personal Therapeutics (trading as Vivan Therapeutics).

Keywords:

Personalised cancer, therapeutics, drug screening, vivo model, genomics-based drug screening, technology, clinical trial.

Written Medicine

Company Profile:

Written Medicine was founded in 2012 on the principles of increasing patient access to medical information. Working in pharmacies on the high street in London's vibrant multicultural communities presents a persistent communication barrier where patients don't speak English. Our aim is to improve the current state of affairs where these patients are excluded from the benefits provided by the established health infrastructure for not being proficient in English.

Our vision is to re-energise the pharmacy sector and push for equal patient rights. We will provide healthcare-related information to anyone who needs it, in a language they understand. After all, those who are empowered can take command of, and responsibility for, their own health.

Xploro

Company Profile:

Xploro® is a disease agnostic and clinically validated Digital Therapeutics platform that uses augmented reality, gameplay and an artificially intelligent Avatar Guide to deliver health information to young patients, reducing the anxiety associated with hospitalisation.

The platform consists of a mobile application for patients, a web application for parents and a management portal for clinicians.

By putting age-appropriate health information in the hands of children Xploro reduces anxiety and improves clinical outcomes. By preparing children for treatments Xploro helps to reduce repeat procedures and shorten treatment times. By using gamification and rewards systems Xploro allows clinicians to effectively capture patient-reported outcomes. And by improving child health literacy Xploro provides the foundations for a generation of patients better able to self-manage their healthcare.

Keywords:

Pediatrics, patient centred, health literacy, hospitals, cancer, proton therapy, gamification, AI, mobile health, digital therapeutics, patient reported outcomes (PROMS), adherence.
